

**Sawed, Steeled, Frosted -** This matte finish is created by sawing the surface. It may also be accomplished by sandblasting the surface with steel shot, or by frosting it with sandblast sand.

**Polished Margin -** The surface is polished and a panel area is frosted, making a place for lettering.

**Shell Rock -** This is a hewn surface with hewn sides. This also referred to as Rock Pitch when seen on the sides of a monument.
